Layout notes

- ▶ We employ a visual “counting table” where users can drag, drop and stack banknotes and coins
- ▶ In the lower right, you will see a column with one black stone at the bottom and nine white stones stacked on top of it. This is used in a separate component of the app to multiply or divide – the user drags the black stone up, changing the colors of the number of stones they have determined is the quantity they wish to multiply or divide by.
